

# Fulfilment Centre Operations Dashboard

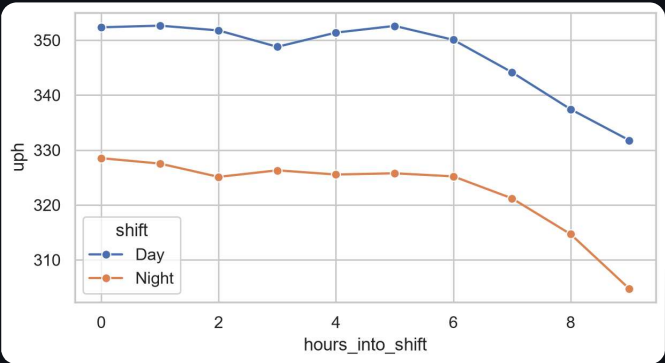

Synthetic 90-day dataset • hourly station-level throughput, downtime and disruption events

|             |         |                      |                   |
|-------------|---------|----------------------|-------------------|
| Total units | Avg UPH | Hours hitting target | Starvation events |
| 41,535,619  | 335     | 49%                  | 188               |

## Daily throughput

## Fatigue curve — productivity across the shift

## Cost of pod starvation

## UPH vs target by station

**About:** built by Akshay Shelke — MSc Data Science, with first-hand fulfilment-centre operations experience.  
Data is fully synthetic; no proprietary information is used.
